Abstract (en)

[origin: WO9418236A1] The present invention relates generally to molecules carrying one or more binding determinants for alpha -chain of human Leukaemia Inhibitory Factor binding receptor and to genetic sequences encoding same. More particularly, the present invention contemplates a molecule which is non-naturally occurring and which comprises a carrier portion and an active portion and wherein the active portion comprises amino acid residues or chemical equivalents thereof which constitute a binding determinant for the alpha -chain of the human Leukaemia Inhibitory Factor (hLIF) binding receptor.
