Abstract (en)

[origin: WO9523406A1] An apparatus comprising a sound-proofing hood (18) enclosing a frame (17) rigidly connected to the base (2) of the machine (1), and surrounding said machine, said hood (18) being resiliently supported on the frame (17) via resilient suspension members (19, 20) for vertically and laterally supporting the hood (18) relative to the frame (17). The apparatus is useful for sound-proofing noisy machines such as combustion turbine engines, and turbo-alternator units in particular.
