Abstract (en)

[origin: EP0747557A1] The two supports (1,2) are rotatably connected to one another by a hinge axis (3). A support bearing (5) is arranged on this hinge axis, the upper bearing surface (5a) of which supports a bearing (6) with a bearing surface (6a). The hinge axis has a thread section (3c) and engagement surfaces for a hand tool and is held height-adjustably in a thread (1d) of the frame support or the door support. The support bearing has an inclinedly running bearing surface and the bearing has a correspondingly inclined surface. The hinge axis is formed as a screw, on the head (3b) of which locates the support bearing.
