Abstract (en)

A liner of a deflection yoke is provided with non-threaded sleeves 100. A slide pin 115 is inserted into the sleeve until a head portion of the pin comes in contact with a funnel of a cathode ray tube 140 on which the yoke is mounted. After adjustment, a wedge 116 inserted in a hollow part of the pin for expanding radially the wall of the pin. Thereby, the pin is locked within the sleeve. In this way, the position of the yoke relative to the tube is secured. <IMAGE>
