Abstract (en)
[origin: WO9620650A1] Described is a drill bushing for use in osteosynthesis, in particular for drilling, cutting threads and inserting implants. It has an upper end (1), designed to insert an instrument or implant, and a lower end (2) which can be placed on the bone. Positioned near the upper end (1) is a coolant connection point (3) by means of which coolant can be passed into the bushing.
