Abstract (en)

[origin: DE4406643C1] In a process for fitting a circular cable having a plurality of individual wires with a multi-pole, preferably flat plug into which the individual wires are inserted, the free ends of the individual wires are stripped and fitted with contacts. To allow economical fitting by such a process and greatly reduce the risk of damaging the small contacts, the individual wires are inserted side-by-side into a wire holder of the plug, the ends projecting beyond the wire holder are cut to the same projecting length and stripped over the same length, a contact bearer with the corresponding number of adjacent contacts is secured to the end of the wire holder accepting the individual wires and the opposite regions of stripped individual wires and connectors of the contacts are secured together to provide electrical contact.
