Abstract (en)
Trenching apparatus (30) for protecting personnel working in an excavation is described. The trenching apparatus (30) comprises two panels (32) positionable in use vertically to support the sides of a trench, the panels (32) being connected and spaced by struts (44) extending therebetween. The panels (32) are shaped such that in use the spacing is a maximum at their lengthwise centres and decreases generally continuously either side thereof to the edges. <IMAGE>
