Abstract (en)
[origin: EP0748910A2] The locking device may be used for securing a door in a building. It has a drive rod lock with a key-operated bolt, a latch and a drive rod, via which a bolt (13) of a pivot lock (2) is operated, with the bolt closed by a handle on the inside of the door. The drive rod operates a cam wheel (18). This engages the bolt in one movement direction of the drive rod, but allows free movement of the latter in the other direction.
