Abstract (en)

[origin: EP0748911A1] The closure device is attached to the hinged side of the door or window. It has a closure element (2) attached to the door or window frame (26). There are sliding bolts (3), secured to the door or window (25), selectively brought into engagement with the closure element via an operating drive. The sliding bolts are provided by eccentric bolts supported by a drive rod (5) with a claw opening at one end.
