Abstract (en)
[origin: EP0749712A1] The vertical components (4) are located on a belt (14), which sectionally is supported by several rockers (10) pivotable on the frame (1). Several guide components (7) are provided on the frame, which guide the vertical components displaceably in a vertical direction. Each vertical component contains a roller which locates on the elastic belt. The roller is rotatably located in a recess of the vertical component. The belt is endless and is linked around face-side rockers in the longitudinal direction of the lath grid. Each lath (3) has a recess in which the corresponding vertical component is linked. The vertical component is rounded at its lath-side end.
