Abstract (en)

The printing formes (4,5) are guided on their side areas in profile bodies (9). The profile bodies have recesses (12,13) which secure the side areas of the printing formes. The recesses run S-shaped in the profile bodies, can be meander-shaped or straight. The profile bodies have at least one drive unit (14), both for the printing forme being fed in and for the one to be removed. The drive units work in conjunction with support components (15), which move frictionally the side areas of the printing formes. The support components are shaped as rollers or are strip-shaped. The side areas of the printing formes are engaged on both sides.

Abstract (de)

Die Erfindung betrifft eine Einrichtung zum Wechseln einer Druckform an einem Druckformzylinder im Druckwerk einer Rotationsdruckmaschine. An einem Druckwerk (1) ist eine Halteeinrichtung (9) vorgesehen, in der sowohl mindestens eine zuzuführende Druckform (4) aufgenommen als auch eine auszuwechselnde Druckform (5) aufnehmbar ist. Die Druckformen (4, 5) werden im wesentlichen an deren Seitenbereichen (6) in Profilkörpern (9) geführt. <IMAGE>
