Abstract (en)

[origin: DE19522901C1] One end of an additional coupling rod (16) is connected to the pivot point (13) of a first coupling rod. The other end of the additional coupling rod is pivot-connected to one arm (17) of a pivoting adjusting lever (18) which is continuously lockable in different pivoting positions so that the pivot point becomes dependent upon a selectable suction position of the lift sucker (29) on different curved paths. The intersection point of the curved paths lies on a middle line (35) which corresponds to the middle line of the pivot point of the additional coupling rod in its position corresponding to the transfer position of the lift sucker.
