Abstract (en)

[origin: EP0750070A1] The road laying plant can build up the road surface in several layers. All the working sections are high compression boards (B1-3) for the production of a covering layer (C1-3). Each rear high compression board (B1,2) is constructed as a concrete compression board, and each board has a forwardly positioned tamping unit (T) and a high compression pressure strip (18) which is subject to the action of a vibrator (V). An adhesive medium tank (7) is attached to the chassis (1) and is connected to a sprayer (S).
