Abstract (en)

An aspirating device, particularly for water-closets, having a tubular element (12) that is meant to be arranged on the upper rim of the opening (13) of the water-closet bowl (11), the inside portion of the tubular element (12) being connected to the inside of the bowl (11) by a plurality of suction ports (14) formed therein. A suction manifold (15) furthermore extends from the tubular element (12) and is connected to a suction fan (17) that is in turn connected for discharge to a duct (21) leading into the venting system of the hydraulic system or outside the room where the bowl (11) is located.
