Abstract (en)

[origin: EP0750225A1] A method for reducing residual sensitizing dyes after development processing of a silver halide color photographic material comprising a support having thereon at least one silver halide emulsion layer, which comprises incorporating a compound represented by formula (I): <CHEM> wherein R<1> represents a hydrogen atom, a substituted or unsubstituted alkyl group or a substituted or unsubstituted aryl group; R<2> represents a substituted or unsubstituted alkyl group, a substituted or unsubstituted aryl group, a substituted or unsubstituted alkylamino group, a substituted or unsubstituted arylamino group, a substituted or unsubstituted alkoxy group, a substituted or unsubstituted aryloxy group, or a substituted or unsubstituted heterocyclic group, into the silver halide color photographic material.
