Abstract (en)
[origin: DE19522281C1] A program control device is for washing machines or dishwashers and has a tooth construction (2) for anticipatory control and a program drum with a program serration (6). A transport pawl (1) is associated with the tooth constructions (2, 6), the first one of which (2) features at least one high gap (3) and at least one low gap. In addition, the tooth construction (2) has at least one medium gap (5) whose level lies between the other two gaps (3, 5). The program serration (6) features at least one deep tooth (7). When a deep tooth (7) is brought into the lift range (H) of the transport pawl (1), the program drum is only moved on when a deep gap (5) comes next to the deep tooth. When a medium tooth (8) is brought into the range (H), the program drum is moved on when a medium gap (4) or a deep gap (5) comes next to the medium tooth (8).
