Abstract (en)

[origin: EP0750444A1] The method involves pressing a heat barrier film (15) in a special form as a tablet (12) of disposable heat resistant material with an essentially flat surface. The heat conductor (17) is attached to the surface with partial embedding in the heat barrier material. The tablet is placed in an empty carrier shell (23) as a one-piece heat barrier. The partial embedding is performed in the vicinity of protruding attachment feet (22) of the heat conductor. The heat conductor is placed in an insertion tool (16) and pressed into the surface of the tablet with its embedded parts.
