Abstract (en)
[origin: DE19541346A1] The frame (12) and leaf parts (14) are mutually insertable and relatively rotatable. The leaf part can be lifted against the frame part by a hoist during the relative rotation of both parts in the direction of the rotation axis (M). Pref. the hoist comprises a movement screw consisting of a screw bolt and nut, with one part of the movement screw secured on the frame part, while the other one is secured on the leaf part, with a possibility of internal configuration. The hoist may contain a bolt (21), whose lower part forms the movement screw (23).
