Abstract (en)

[origin: WO9623299A1] In an apparatus (1) comprising at least one rotationally drivable magnetic head (7, 8) and a cleaning device (21) for cleaning the head face (7A, 8A) of the magnetic head (7, 8), the cleaning device comprises a cleaning unit (29) which is rotatably supported on a movable support (28) and which comprises a cleaning-element support (35) and cleaning elements (36) projecting from this support. The cleaning-element support (35) and the cleaning elements (36), which are connected to and laterally project from this support, are formed by a single constructional part (37), at least the cleaning elements (36) of this constructional part consisting of a comparatively soft synthetic material having a hardness in a range of between 75 and 100 Shore A.
