Abstract (en)
[origin: DE19509202A1] Electrically conducting connection between a first and a second boundary surface of a substrate (8) of an electronic switch with several leads (3) electrically insulated from each other is claimed. The novelty is that the leads (3) are arranged in a connecting element having first and second surfaces, so that both surfaces are connected, and the first surface partially coincides with the first boundary surface and the second surface partially coincides with the second boundary surface. Prodn. of the connection is also claimed.
