Abstract (en)

The present invention relates to an integral type of safety helmet for motorcyclist, motorists, sports drivers, including an improved visor. The helmet comprises a hollow cup body including, on a front side thereof, a window arrangement. At the window a visor is arranged, the visor being connected to a supporting element which extends on the top of the visor in a central top region of the front side of the cup body. This supporting element is pivoted to the cup body at a top region thereof which is recessed from the visor, and can swing about a pivoting axis substantially perpendicular to the symmetry plane of the cup body, for opening or closing the visor. <IMAGE>
