Abstract (en)
[origin: EP0750865A1] The case (1) comprises an edge plate (2) on which is hinged a cover (3), around a hinge (9), and a transparent glass or resin container (4). The case bottom (5) has four retaining holes (50) each having upper and lower parts defining an end stop (54). The edge plate has anchoring legs (6) for assembling the container and plate via cylindrical retaining chimneys (7) in the container. The diameter of these chimneys is constant and they are formed on the container along the same axis as the bottom holes. The retaining chimneys, located at the four corners of the container, each correspond to a bottom hole and an opposite plate anchoring leg whose height is slightly greater than that of the chimney.
