Abstract (en)

[origin: EP0751589A1] The connector includes a component for closing a space between a conductor and an opening of a passage at a level of a rear face. The closing component (7) includes a single support with a case (1). It is articulated using a thin link. Each passage includes two closing components which cooperate to close a free space. The free space is annular in form and each of the closing components is shaped as a half ring. The closing components include flexible skirts (9) on their outside faces. Locking components (24) cooperate with complementary arrangements in the passage.
