Abstract (en)  
[origin: WO9524841A1] A dispensing device for a relatively viscous liquid essentially includes a body (1) in which a cartridge (2) forming a container (13) and having an applicator brush (3) at one end can easily be mounted, one side of said body (1) being provided with a push button (15) for actuating cogs (19) which in turn actuate a magnetic element (24) slidably housed within the body (1) and magnetically interacting with a ferromagnetic element (29) surrounding a member (28) which supports the applicator brush (3) and is slidable within the cartridge (2). Said dispensing device is useful, e.g. for applying nail varnish.
