Abstract (en)
[origin: WO9525888A1] A fuel injection device for a common rail system has an injection valve controlled by a driving mechanism (18, 34) through a double seat valve (14). The seat valve is designed together with the valve seats (36, 37) and the driving mechanism so that the pressure is equilibrated in both positions of the seat valve. The invention is suitable in diesel-engine injection technology.
