Abstract (en)
[origin: EP0752231A1] A dishwashing machine is described comprising a washing tub (1) with a wash-fluid trap (2) secured on its bottom having at least a connecting duct (3,4) to a pump for recirculation or discharge of the wash fluid, said trap being provided with filtering means (5,8) for the fluid to be recirculated or discharged. According to this invention said filtering means (5,8) comprise at least a first filtering element (7) housed within said trap (2) in a way to allow its angular removal and that said first filtering element (7) is configured so as to allow its angular removal by the force of at least a portion of the fluid flow sucked by said pump. <IMAGE>
