Abstract (en)

[origin: EP0752503A1] The Ring seal arrangement consists of a seal (5) made from a hose (11) with ends (7,8) which are pushed one inside the other on insertion into the gap (10), with an excess circumference relative to the circumference of the gap. By shortening the overlap (9) of the hose ends in the gap the seal can be radially and axially adjusted. The seal ends fit together to prevent the escape of the filler material under pressure inside the hose.
