Abstract (en)
[origin: EP0752530A1] The drive connection between the second part (6) of the swash plate (3) and the piston (2) takes place via a ball head (21) which engages in a guide running transversely to the axis of the piston. The ball heads are rigidly attached to the circumference of the swash plate and the ball guide extends transversely through the drive side end (26) of the piston. The rotation of the piston about its longitudinal axis is closely restricted.
