Abstract (en)
[origin: WO9627931A1] A system for controlling directly or indirectly electricity-driven functional units, in particular partial units of a house, has an energy supply for the individual functional units, a switch and control unit that can be associated to a functional unit and is connected to a central control, and at least one command unit associated to the partial unit. The command unit, the central control and the switch and control units only exchange data with each other and only the switch and control units actuate the energy supply or the operation of the functional units.
