Abstract (en)
[origin: EP0753280A2] The glove has two cover faces (1) with closed side edges. The cover parts are elastically connected at parts of the closed edges, preferably near the slip-on opening (11) starting from the narrow side. The sponge like inner face (1) can be turned inside out by stretching the elastic connection (2). The elastic connection can be formed by elastic bands (2). The sponge-like inner faces have different cleaning properties from the outer faces. One cover face has an abrasive surface.
