Abstract (en)
[origin: EP0753383A1] The tool box has two parallel rows of superposed upper (1) and intermediate (2) racks and a double lower rack (3). Each row is pivoted together by small rods (8-10) which enable their concertina opening and complete visibility of the tools they contain. On opening the box, stops (14) in the upper rack and stops (15) in the intermediate rack are only supported respectively in the corners (14') of the intermediate racks and in the corners (15') of the double lower rack (3). The lower double rack has a hollow central partition (7) having at each end a guide pin and a sheath. The partition receives a retractable handle (6) with an oblong hole at each end which allows its guided vertical displacement by the two guide pins and the sheaths. The hollow central partition allows housing in its lower part a handle for a bottom tool box which is attached to the lower double rack by hooks and clasps (12).
