Abstract (en)  
[origin: EP0753467A1] A bag-in-carton (1) has a substantially rectangular parallelopiped type carton body (2), an inner bag (3), and a spout (5) provided on an inclined surface (2g) of the carton body (2). The inner bag (3) is pasted on adhesive regions (9) formed on the substantially whole of each of the inclined surface (2g), a pair of opposite surfaces (2b, 2d) adjacent to the inclined surface (2g), and a side surface (2a). The inner bag (3) is also pasted partially on a side surface (2c) which is away from the inclined surface (2g). When the content of the carton is sucked out via the spout (5), the inner bag (3) is peeled off gradually from the side surface (2c) out of the inner surfaces of the carton (2), and deformed and moved toward the spout (5). <IMAGE>
