Abstract (en)

A method for producing a carbonaceous material including the step of contacting a carbon material with a polymer having in the molecule thereof one or more reactive group(s) selected from aziridine group, oxazoline group, N-hydroxyalkylamido group, epoxy group, thioepoxy group, isocyanato group, hydroxyl group, amino group, vinyl group, acryl group or methacryl group, and an alkoxy carbonyl group represented by the formula (I) <MATH> wherein R<1>, R<2> and R<3> are the same or different groups and denote a hydrogen atom, or a specific organic residue.
