Abstract (en)
[origin: EP0753710A2] The device has an outward facing shaped section (2) on a wall of an inner container engaged by a hopper pipe whose hopper (9) is arranged inside the shaped section and whose outlet tube protrudes through a bore in the shaped section and out of the inner container. A seal (10) is inserted between the hopper and the adjacent wall section of the shaped section. The hopper is clamped against the seal by a clamp device (11,12) outside the inner container which engages the hopper tube and the hopper tube (7) has a direct, sealed coupling to an outlet line (19).
