Abstract (en)

[origin: EP0753793A1] The present invention provides a black-and-white aqueous alkaline photographic developer composition and a method of processing an exposed photographic silver halide element comprising the steps of developing by means of a developer comprising a silver halide developing agent and treating the developed element with a fixer composition, wherein the developer composition comprises a developing agent, a superadditive auxiliary developing agent, an antifogging agent, an antioxidant compound, a sequestering agent and a combination of three different buffering agents, wherein the three buffering agents are represented by carbonate, borate and phosphate compounds.
