Abstract (en)

[origin: EP0753797A2] Imaging apparatus for printing images on two sides of a substrate (42) from latent images formed on a latent image bearing surface (16) including: developing apparatus (22) for developing the latent image with a liquid developer to form a developed liquid toner image; a first intermediate transfer member (40), first transfer apparatus for transferring the developed image from the latent image bearing surface (16) to the first intermediate transfer member (40) at a first transfer region; a second intermediate transfer member (47) second transfer means for transferring the developed image from the first image transfer member (40) to the second intermediate transfer member (47) at a second transfer region; and third transfer apparatus for simultaneously transferring a developed image from the first intermediate transfer member and a developed image image from the second intermediate transfer member to the two sides of a substrate (42).
