Abstract (en)  
[origin: WO9623559A1] The description relates to a ski binding with a front clip (1) which is connected via a support (3) with a rear clip (2) movable along said support (3) and has a laterally pivotable sole clamp (10) supported against lateral outward movement on a pressure member (13) movable along the support and loaded by at least one spring (14). In order to be able to pivot such a ski binding easily about a front transverse spindle (6) it is proposed that the support (3) pivotable with the front clip (1) about a transverse spindle (6) in the region of said front clip (1) consist of a hollow section (4) accepting the spring (14) for the pressure member (13) and the pin (41) of a screw system (40) for adjusting the rear clip (2) movable on the hollow section (4).
