Abstract (en)

A method for covering a ship deck, according to which the position of the deck planks (11) with respect to each other is determined by means of transverse securing strips (12), so that the guide means (14) to be connected to the securing strips are fitted into the corresponding holes formed in the deck planks, which means that the securing strips and deck planks together form a prefabricated cover unit (10) to be fastened to the ship deck. The cover unit (10) comprises at least two deck planks (11) and at least two transverse securing strips (12) located on the underside of the deck planks, to which securing strips guide means (14) are attached fitting into the holes formed in the deck planks. <IMAGE>
