Abstract (en)
[origin: EP0755061A1] The high to medium level voltage converter is within a metal housing 2 and consists of a magnetic core 4 that is wound with a secondary winding 5 with the ends 6,7 secured to a terminal block 8. The secondary coil is wound with insulation and is then wound with two primary coils 11,12 having an interconnection 15. The ends of the primary coil are coupled to terminals A,N. The internal space of the housing is filled with an isolating material.
