Abstract (en)

[origin: EP0755105A1] The module contains two input and two output contacts (6;7), two earth contacts (5), and two bipolar lightning conductors (8) which can be short-circuited by a conductive element (10) connected to the signal lamp (15). The lamp is earthed for fault-signalling purposes by either of two single-strand conductors (20) each having an insulating sheath (21) over most of its length. The conductive element is folded into two parts with bare ends connected to the lamp.
