Abstract (en)
[origin: WO9519024A1] The sign consisting of a board (10) which may be of Corflute or similar material having die cut therefrom at required position components (11) which can be inverted, the two sides of the board (10) being of different colours. The arrangement being such that when the components (11) are inverted, they can display a numeral letter or the like. The components can be rotatable with respect to the board (10) by means of rods (15) which extend downwardly through passage ways in the board and the component. The invention also describes a sign in which a strip member can pass through slits in the body so that particular material thereon can be seen when examining the body.
