Abstract (en)

[origin: EP0755703A1] The snow ski has an upper face (9) connecting two lower lateral ribs via two lateral inclined surfaces (10,11). The ski has, in its foot area, at least one rigid platform (12) which raises and supports the bindings for the ski boot. The platform has an inverted U-shaped cross section spaced above the ski surface. The platform is fixed on the lateral faces of the ski via a visco-elastic spacer which is connected to the exterior face of each side.
