Abstract (en)
[origin: EP0755786A1] The control device uses a number of processors (2.1,...2.4) coupled together via a bus system (1) for signal transfer between them. At least one of the processors has a memory (3.1,...3.4) which can be updated with new programme or operating parameter data entered via a programming device (5) coupled to an interface point (4) of the bus system. Pref. a personal computer is used as the programming device, at least one of the processors also provided with a data card reader allowing direct input of data via an entered data card.
