Abstract (en)

[origin: EP0755839A2] The tram consist of at least two cars pivoted to each other, supported by bogies along the centre line of each car. All the bogies are in a fixed relation to each other as regards their turn angle relative to the cars, regardless of the relative position of the cars. This fixed relation is expressed by the equation: $0 = K_1.\psi_1 - K_2.\psi_2 + K_3.\psi_3 - K_4.\psi_4, \dots, - (-1)^n.K_n.\psi_n$ where ψ_1 to ψ_n are the turn angle of the bogie in question, K_1 to K_n are freely selectable proportionality factors, and n is any number of cars.
