Abstract (en)

[origin: EP0755867A1] The wrapping sleeve (100) has a complementary detachable flap (103) superposed on its outside with its two lateral ends joined. The space formed between the flap and the sleeve delimits a pocket in which is inserted a coupon (10). The flap has a welding line (102) which extends along the sleeve cylindrical surface. The flap is connected to a portion of the wrapping (101) by a thin sticking line (105) adjacent to the flap free lateral edge and by a perforated line (104) at its other lateral edge. The sticking line is defined by two parallel bands (100,111) previously impressed on one of the opposite faces which delimit an effective sticking zone (112). The two parallel bands are made from a varnish with a thickness of about a millimetre.
