Abstract (en)

The seal consists of a circular inside cover (3) whose diameter matches that of the container. A raised area (18) runs along part of its circumference rising at an angle to the cover plane, and has ring flange (7), with an opening (11), along its rim. An outside cover (9) lies on at least part of the inside cover and connects to it via an articulated axle (20) so that it can swivel about 180 degrees . The inside cover's underside has a vapour diffusion barrier (16), in the form of a thin foil, over its entire surface. This barrier has a tear perforation in the area of the opening. The outside cover has a projection (10) filling the opening whose underside is flush with that of the inside cover. This underside is firmly connected to the vapour diffusion barrier. The lower part opening's wall facing the barrier has a circumferential groove (12), and the lower part of the projection has a circumferential bead (14) in the groove to engage the two covers.

Abstract (de)

Der Verschluss für oben offene Hohlbehälter (1) besteht aus einem im wesentlichen kreisförmigen Innendeckel (3) dessen Rand entlang eines Teiles seines Umfangs eine unter einem Winkel zur Deckelebene ansteigende Erhöhung aufweist; die Unterseite des Innendeckels ist mit einer Dampfdiffusionssperre (16) verbunden, die im Bereich einer Öffnung (11) im Innendeckel mit einer Aufreißperforation (19) versehen ist. <IMAGE>
