Abstract (en)

[origin: EP0756262A2] An apparatus for hot sealing parcels or packages comprising a tape of adhesive thermoplastic material (3) and a device for affixing a thermoseal to the tape wherein said tape has intentional non-homogeneous areas formed in combination with the thermolabile characteristics of the tape (3) and with the temperature of said thermoseal in order to impair the integrity and the continuity of the tape only in the area where the mark (2) is stamped, and in order to promote the onset of preferential fracture lines in said area and to cause the tape to penetrate into the underlying substrate on which the seal is applied. The invention also provides a method of hot applying a seal by said apparatus. <IMAGE>
