Abstract (en)

[origin: WO9528106A1] A heel seat and side lasting machine has adhesive-applying nozzles (192) and also fastener-inserting units (458) for inserting tacks into the cement-lasted side portions of the shoe. For determining the path of the nozzles (192) the machine has a path-determining mode in which the path can be determined under operator control. The path of the fastener-inserting units (458) can subsequently be calculated from the data relating to the path of the nozzles using computer means. Moreover, if desired the path of the units (458) may be offset by a selected amount from the path of the nozzles (192).
