Abstract (en)
[origin: DE4413355C1] A process is disclosed for creating a non-detachable connection between two plastic parts (1, 2), the connection allowing a degree of movement between the plastic parts (1, 2). The connection is made by forming at least one tab (3, 4) on one of the plastic parts. The tab (3, 4) is then deformed until it encloses a region of the second plastic part in such a way as to be non-detachable. Finally, the shape of the tab (3, 4) thus obtained is set. A connection of this type can be used advantageously to connect the sections of a power conducting chain.
