Abstract (en)
[origin: DE4413871C1] A treatment device (100) for a textile web (1) comprises a drum (20), rotatable in a container (2) with a treatment liquid (4), around which the web (1) is wrapped. The ends of the drum (20) are supported on bearing plates (10) arranged near the fronts of the container (2). The bearing plates (10) are supported at the upper end on an eccentric (6), opposite the lower end of which there is a torque support (9). As the eccentric rotates, the bearing plates (10) with the drum (20) and the web (1) wrapped around it are caused to oscillate in the treatment liquid (4).
